SKILLS

Adobe XD, Adobe Photoshop, Adobe Illustrator, Figma, Axure, HTML5 / CSS3, Win Less, Bootstrap, JavaScript, Jquery

Project Handled

HIMS (Hospital Information Management System)

Project #1

Project Title	:	**OPEMR** (Out Patient Electronic Medical Record)
Client	:	KIMS Hospitals, Prime Hospitals, Aster Ramesh Hospitals
Organization	:	Softhealth India Pvt Ltd.
Job Location	:	Hyderabad, India
Duration	:	March -2022 to Till Date
My Role	:	UX and UI Design
Technology	:	Adobe XD, Axure, Adobe Illustrator, Figma, HTML5 / CSS3, Bootstrap, Javascript

Project Goal

The goal of this project is to maintain, organize and simplify the management of hospitals ranging from a small clinic to a recognized multi-specialty hospitals in and around India and also in parts of islands in the west indies.

The objective was to design easy work around for the employees at the hospital which includes doctors.

The patient will go through the whole process of visiting a hospital in an easy comfortable manner through this application.

The personal assistant of the doctor can manage consultations for a doctor in a systematic and organized way. Doctors can go through their process of consultation by posting diagnosis for the patient and also view the previous history of the patients so as to provide much accurate diagnosis in the process.

An administrator of the hospital can go through all his staff and the reports generated and also compare logistics for a selected period of time at his will from anywhere.

Project Description:

In this project **OPEMR** , mainly we focus on Doctors Work. By implementing this, we reduce the time of Doctors to write patient notes and also we give the auto-completion for lab tests and prescriptions. And we provide an option to create templates and profiles for Doctors to Re-use the Data. By implementing all these options, patients care has improved and everything has documented. We give those documented data to the patients by giving Digital Prints. Queue management system has been introduced and implemented. By using this, after completion of visit to the doctor, we will notify the next patient please be ready you are next to go to Doctor's cabin .EMR allows patients for uploading their health related information and also allows for easy accessibility of the uploaded data from anywhere and at any time. The information may include Doctor Appointments, Medication details, X-Rays etc.

Role and Achievement

- Hand in development of every page in the application through thorough analysis and make use of easy and complex coding techniques to make the application swifter elegant and easy to manipulate.

- A structural format of coding so as to let other developers understand and support the application.

- Excelled at a professional level in learning java script, j query and angular js so as to withstand any problem that may arise or could look complex in the coding aspect and bring out new techniques for coding to make the life of other developers simpler.

Project #2

Project Title	:	**IPEMR** (In Patient Electronic Medical Record)
Client	:	Aster Ramesh Hospitals, University Hospital of the West Indies
Organization	:	Softhealth India Pvt Ltd.
Job Location	:	Hyderabad, India
Duration	:	March -2022 to Till Date
My Role	:	UX and UI Design
Technology	:	Adobe XD, Axure, Adobe Illustrator, Figma, HTML5 / CSS3, Bootstrap, Javascript

Project Description:

In this project **Hospital Inpatient Management**, mainly we focus on the Admitted Patients for the hospital. In this IP Module, we capture the Brief information of the patient. We display that information to doctors and Nurses to take necessary steps. We give a provision to doctor to Patient notes and Patient against all activity like Prescribe Lab Tests and Medications and nurse orders. We display those results to doctors and also if any Abnormal Results, we display notifications against that patient web model and mobile model.
